Ministry of Commerce and Industry

The Commerce Today Monthly Critical Commodities Bulletin is a product of the Ministry of Commerce and Industry developed to inform the public on key commodities inventory and pricing on a monthly basis. The data reported is gathered based on assessment of import documents which include commercial invoice, assessment notice, single administrative document, clean report of findings, and targeted market sample surveys.

The below analyzed prices are contingent on inflation, exchange rate, import duties, shipping costs, insurance, licensing and registration fees and other administrative overheads which may also be due to the exchanged rate.

Gasoline prices, Octane-95, 09-Mar-2026: The average price of gasoline around the world is 5.10 U.S. Dollar per us gallon. However, there is substantial difference in these prices among countries. As a general rule, richer countries have higher prices while poorer countries and the countries that produce and export oil have significantly lower prices. One notable exception is the U.S. which is an economically advanced country but has low gas prices. The differences in prices across countries are due to the various taxes and subsidies for gasoline. All countries have access to the same petroleum prices of international markets but then decide to impose different taxes. As a result, the retail price of gasoline is different. Read our [fuel price primer](#) to understand fuel price differences across countries and over time. Use the drop menu to see the prices in gallons. On the graph, the prices for the countries indicated with a * are updated on a weekly basis. The prices for the other countries are updated on a monthly basis because these countries have regulated fuel markets and prices do not change frequently
